From more than 2,500 nominated projects, the Bernards Township Sewerage Administration Building has been selected for a "Green Building of America Award". Designed by Kimmerle Newman Architects, PA, the building will be featured in the upcoming special edition of **Real Estate & Construction Review - Northeast Green Success Stories**, published by Construction Communications. Each Green Building of America success story highlights, "a case study that intertwines the words of the project's owner/developer, consultants, architects and contractors to explain how the teams worked together to design and build one of the region's most important, innovative, unique, new or renovated sustainable facilities."¹

Kimmerle Newman Architects was asked by Bernards Township to design an environmentally sustainable, LEED certified addition to their Sewerage Authority Administration Building. The first LEED Certified building in the township, this successful project incorporates a new plant wide operating and control system that enhances the efficiency and performance of the larger system operations throughout the town. Developed in working partnership with township Engineer and Planner and Sewerage Authority Administrator Peter Messina, the project has many sustainable features that will save on operational costs, and provide a pleasant work environment for their staff.

Project team included George Kimmerle, Paul Newman, X. Cindy Cui and William Kimmerle. Ms. Cui led the LEED certification process.
