Located on the right side of the Public Works building is a container used to collect waste oil from the Township’s own fleet operations as well as disposal of oil from residents. This waste oil is picked up by a recycler and generates on average $.40/gallon.
Much of today’s lighting contains hazardous materials such as mercury, lead or PCBs. When these materials are released into the air or water it causes health concerns as well as harming the environment. It is important to keep these out of the waste stream.

In response to this, Bernards Township has developed a recycling program for this purpose. The Department of Public Works located at 277 South Maple Avenue is now accepting fluorescent bulbs for recycling on Wednesdays and Fridays from 8:00AM-2:00PM. This is for residents only and I.D. is required. No businesses allowed. If you are a business and need guidance for a recycler of bulbs, please call (908) 204-2512 for more information.
Bernards Township has clothing collection bins at the Pill Hill Landfill and at the Community Service Building on Stonehouse Road. Approximately 145 tons of clothing were collected last year.
